\* Prices do not include potential costs for spare parts and components if required, consumables (e.g., refrigerant) and equipment itself. Quoted prices are for reference only. Actual pricing depends on factors such as equipment type and quantity, installation/repair/service complexity, and material requirements, which can only be assessed by the technician during inspection (or by detail description/photo if available). Final pricing will be confirmed with you by the technician after diagnostics and prior to invoicing and commencement of work. If a customer chooses not to proceed with recommended repair or service after the diagnostic assessment, a non-refundable call-out fee \$49 will still apply. This covers technician's travel, time, and diagnostic effort.
